

1. Create a Dart program called `price_calculator.dart` that takes the base price of a food item (for example, a burger) and calculates the total price after adding 12% GST. Print both the original price and the final price using string interpolation.

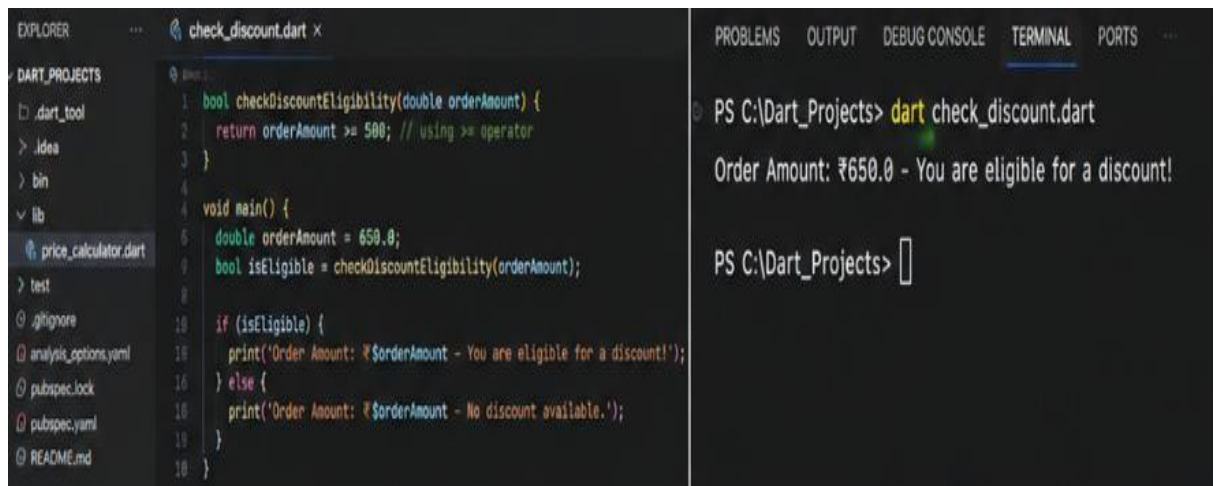

```
EXPLORER  ...  price_calculator.dart x
DART_PROJECTS
├── .dart_tool
├── .idea
├── bin
├── lib
│   └── price_calculator.dart
├── test
├── .gitignore
├── analysis_options.yaml
├── pubspec.lock
├── pubspec.yaml
└── README.md

1 void main() {
2   double basePrice = 250.0; // base price of burger
3   double gstRate = 0.12; // 12 percent GST
4
5   double gstAmount = basePrice * gstRate;
6   double finalPrice = basePrice + gstAmount;
7
8   print('Base Price: ₹$basePrice');
9   print('Total Price after 12% GST: ₹$finalPrice');
10 }
```

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS
PS C:\Dart_Projects> dart price_calculator.dart
Base Price: ₹250.0
Total Price after 12% GST: ₹280.0

PS C:\Dart_Projects> 
```

2. Write a Dart function `checkDiscountEligibility` that takes a user's order amount and returns true if the amount is greater than or equal to 500, otherwise false. Use a logical operator and print a message like 'You are eligible for a discount!' or 'No discount available.' using string interpolation.

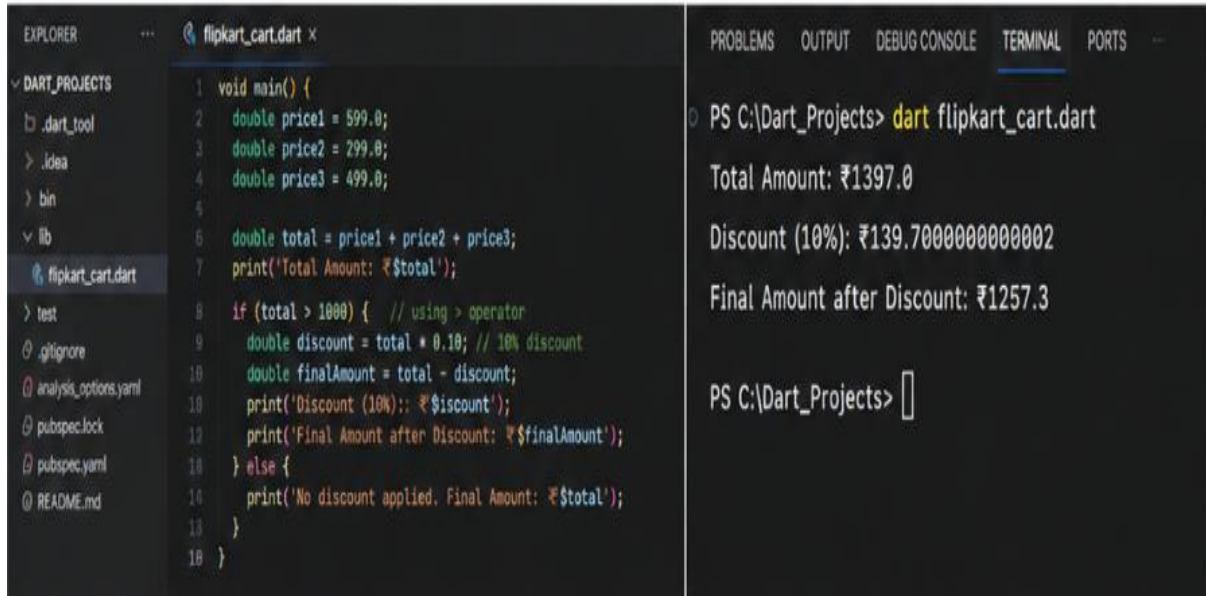

```
EXPLORER  ...  check_discount.dart x
DART_PROJECTS
├── .dart_tool
├── .idea
├── bin
├── lib
│   └── price_calculator.dart
├── test
├── .gitignore
├── analysis_options.yaml
├── pubspec.lock
├── pubspec.yaml
└── README.md

1 bool checkDiscountEligibility(double orderAmount) {
2   return orderAmount >= 500; // using >= operator
3 }
4
5 void main() {
6   double orderAmount = 650.0;
7   bool isEligible = checkDiscountEligibility(orderAmount);
8
9   if (isEligible) {
10    print('Order Amount: ₹$orderAmount - You are eligible for a discount!');
11  } else {
12    print('Order Amount: ₹$orderAmount - No discount available.');
```

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS  ...
PS C:\Dart_Projects> dart check_discount.dart
Order Amount: ₹650.0 - You are eligible for a discount!

PS C:\Dart_Projects> 
```

3. Build a Dart snippet that simulates a Flipkart-style cart: given three product prices (as variables), calculate and print the total, then apply a 10% discount if the total is above 1000. Display the final amount with a message using string interpolation.
- Hint:** Use arithmetic and relational operators to check the discount condition.

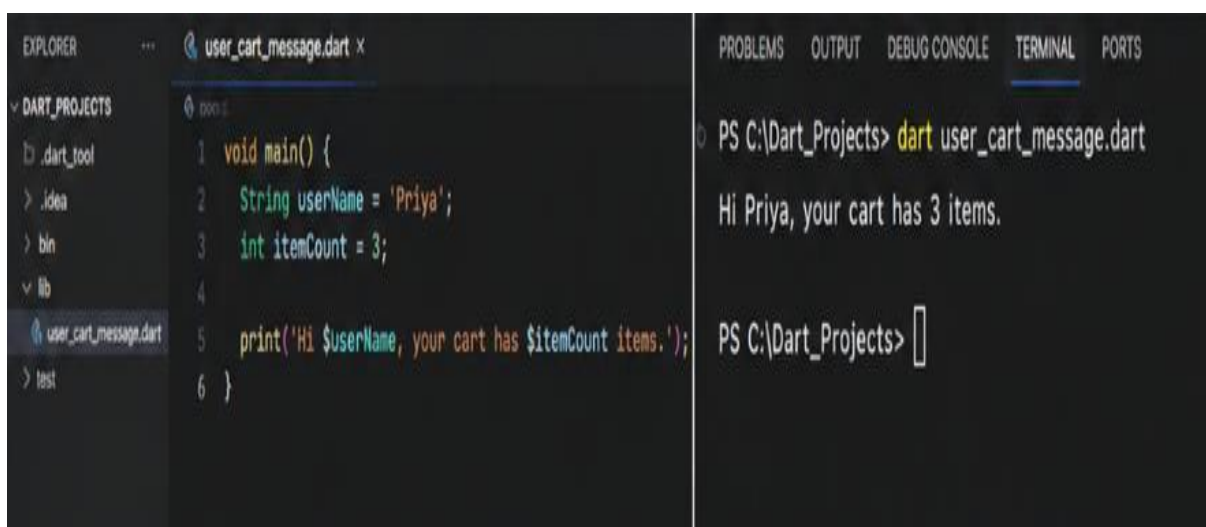

```
EXPLORER  ...  flipkart_cart.dart x
└─ DART_PROJECTS
   └─ .dart_tool
      └─ .idea
         └─ bin
            └─ lib
               └─ flipkart_cart.dart
                  └─ test
                     └─ .gitignore
                        └─ analysis_options.yaml
                           └─ pubspec.lock
                              └─ pubspec.yaml
                                 └─ README.md

1 void main() {
2   double price1 = 599.0;
3   double price2 = 299.0;
4   double price3 = 499.0;
5
6   double total = price1 + price2 + price3;
7   print('Total Amount: ₹$total');
8
9   if (total > 1000) { // using > operator
10    double discount = total * 0.10; // 10% discount
11    double finalAmount = total - discount;
12    print('Discount (10%): ₹$discount');
13    print('Final Amount after Discount: ₹$finalAmount');
14  } else {
15    print('No discount applied. Final Amount: ₹$total');
16  }
17 }
```

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS  ...
PS C:\Dart_Projects> dart flipkart_cart.dart
Total Amount: ₹1397.0
Discount (10%): ₹139.70000000000002
Final Amount after Discount: ₹1257.3

PS C:\Dart_Projects> 
```

4. Write a Dart program that takes a user's name and the number of items in their cart, then prints a personalized message like 'Hi Priya, your cart has 3 items.' using string interpolation.
- Constraint:** Do not use the '+' operator to combine strings—use only string interpolation.

```
EXPLORER  ...  user_cart_message.dart x
└─ DART_PROJECTS
   └─ .dart_tool
      └─ .idea
         └─ bin
            └─ lib
               └─ user_cart_message.dart
                  └─ test

1 void main() {
2   String userName = 'Priya';
3   int itemCount = 3;
4
5   print('Hi $userName, your cart has $itemCount items.');
```

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS  ...
PS C:\Dart_Projects> dart user_cart_message.dart
Hi Priya, your cart has 3 items.

PS C:\Dart_Projects> 
```
