

Session 15

Task 1

Dart Code:

```
void main() {  
    List<String> favRestaurants = ['Barbeque Nation', 'Domino\'s',  
    'Hocco'];  
    print(favRestaurants);  
}
```

Output: [Barbeque Nation, Domino's, Hocco]

Task 2

```
favRestaurants.add('McDonald\'s');  
print(favRestaurants);
```

```
favRestaurants[1] = 'Pizza Hut';  
print(favRestaurants);
```

Output:

[Barbeque Nation, Domino's, Hocco, McDonald's]

[Barbeque Nation, Pizza Hut, Hocco, McDonald's]

Task 3

```
favRestaurants.removeLast();  
print(favRestaurants);
```

```
favRestaurants.remove('Hocco');  
print(favRestaurants);
```

Output:

[Barbeque Nation, Pizza Hut, Hocco]

[Barbeque Nation, Pizza Hut]

Task 4

```
Set<String> myPlaylist = {  
    'Believer', 'Shape of You', 'Believer', 'Perfect', 'Levitating'  
};  
print(myPlaylist);
```

Output: {Believer, Shape of You, Perfect, Levitating}

Comment: The duplicate song *Believer* appears only once because a Set stores only unique values.

Task 5

```
Set<String> filterUniqueCuisines(List<String> cuisines) {  
    return cuisines.toSet();  
}
```

```
void main() {  
    List<String> data =  
    ['Italian', 'Chinese', 'Italian', 'Mexican', 'Chinese'];  
    print(filterUniqueCuisines(data));  
}
```

Output: {Italian, Chinese, Mexican}
