

Project Structure :-

Main.dart :-

```
import 'package:flutter/material.dart';
import 'screens/home_screen.dart';
import 'screens/playlist_screen.dart';
import 'screens/settings_screen.dart';
import 'screens/favourites_screen.dart';
import 'app_routes.dart';

void main() {
  runApp(MyMusicApp());
}

class MyMusicApp extends StatelessWidget {
  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      title: 'My Music App',
      debugShowCheckedModeBanner: false,
      initialRoute: AppRoutes.home,
      routes: {
        AppRoutes.home: (context) => HomeScreen(),
        AppRoutes.playlist: (context) => PlaylistScreen(),
        AppRoutes.settings: (context) => SettingsScreen(),
        AppRoutes.favourites: (context) => FavouritesScreen(),
      },
    );
  }
}
```

Step 2:

Configure named routes for HomeScreen, PlaylistScreen and SettingsScreen (and FavouritesScreen in Step 5) inside the MaterialApp's routes property.

HomeScreen.dart :-

```
import 'package:flutter/material.dart';
import '../app_routes.dart';

class HomeScreen extends StatelessWidget {
  @override
  Widget build(BuildContext context) {
    return Scaffold(
      appBar: AppBar(title: Text('My Music App')),
      body: Padding(
        padding: const EdgeInsets.all(24.0),
        child: Column(
          children: [
            SizedBox(height: 20),
            ElevatedButton.icon(
              icon: Icon(Icons.playlist_play),
              label: Text('Go to Playlist'),
              onPressed: () {
                Navigator.pushNamed(context, AppRoutes.playlist);
              },
            ),
            SizedBox(height: 16),
            ElevatedButton.icon(
              icon: Icon(Icons.favorite_border),
              label: Text('Go to Favourites'),
              onPressed: () {
                Navigator.pushNamed(context, AppRoutes.favourites);
              },
            ),
            SizedBox(height: 16),
            ElevatedButton.icon(
              icon: Icon(Icons.settings),
              label: Text('Go to Settings'),
              onPressed: () {
                Navigator.pushNamed(context, AppRoutes.settings);
              },
            ),
          ],
        ),
      ),
    );
  }
}
```

```
class AppRoutes {
  static const String home = '/home';
  static const String playlist = '/playlist';
  static const String settings = '/settings';
  static const String favourites = '/favourites';
}
```

```
routes: {
  AppRoutes.home: (context) => HomeScreen(),
  AppRoutes.playlist: (context) => PlaylistScreen(),
  AppRoutes.settings: (context) => SettingsScreen(),
  AppRoutes.favourites: (context) => FavouritesScreen()
},
}
```
